ORDER, PICK UP, GO

Customers don't have to wait to place their order or wait while it's prepared, freeing them to keep shopping.

FOR CUSTOMERS

Order Ahead

Customers can order ahead using the shopper app or via a standalone white-labelled microsite that is optimized for mobile, desktop & tablet.

Order In-Store

Customers can also place an order while in the store using the FPR shopper app or via kiosks.

Order Complete

When an order is complete a text message or push notification calls the customer to pick it up.

FULLFILLMENT

Store team can process orders more efficiently, using existing behind counter hardware or a 3rd party device.

FOR RETAILERS

Works on Most Devices

The fulfillment app is accessible from most phones, tablets and computers. Through our partnership with Bizerba, grocers can complete orders including weighing and labeling right on their existing scales.

Starts Automatically

Choose between manually opening and closing the counter or setting it to open and close automatically with store hours.

Straightforward to Operate

Orders appear with a visual and auditory signal, and are identified by the customer's first name and last initial.

CUSTOMIZATION

Standalone Vs Platform

Counter Service can be deployed as a standalone service or with other Speedy Checkout Line products.

Integration

Counter Service can be integrated with existing POS, payment and ERP systems to automatically update SKU and price data. For smaller retailers, manual editing is also possible.

Prepayment

Counter Service can be set up to require payment when the order is placed. Prepayment can be used with Stripe, Braintree, or WorldPay, or another payment processor can be integrated.
